ABOUT ME

I'm a passionate Python Django developer focused on building robust, scalable web applications. In my free time, I explore new tools and features, stay updated with the latest in Django, and enjoy sharing knowledge with peers to promote best practices.

EDUCATION AND TRAINING

SEE

Maha Manjushree Secondary School
<https://www.mahamanjushreeschool.edu.np/>

City: Kathmandu | **Country:** Nepal |

+2 Management (Computer Science)

Nepal Kasthamandap college <https://www.kasthamandapcollege.edu.np/>

City: kalanki | **Country:** Nepal |

LANGUAGE SKILLS

Mother tongue(s): Nepali **Other language(s):** English , Hindi

SKILLS

Programming languages

Fast-api | Python | Git | Postman | JSON | Django Rest FWK | Github | SQL

PROJECTS

hospital management system(backend)

The Hospital Management System (HMS) Backend is a scalable Django Rest Framework (DRF) application offering secure APIs for managing patients, appointments, staff, billing, and inventory. It features authentication, role-based access, data validation, and real-time updates for efficient hospital operations.

Link: <https://github.com/samriddhakunwar/hospitalmanagementsystembackend>

Hybrid URL Shortener (Django + FastAPI)

Built a scalable URL shortener using Django for user management, admin, and ORM, and FastAPI for high-performance APIs with Swagger documentation. Implemented JWT authentication, custom short links, click tracking, and optional link expiry. Designed a hybrid architecture with Django handling redirects and FastAPI serving API endpoints, containerized with Docker and PostgreSQL.

WindowXp portfolio

Build a **fully functional portfolio website themed around the Windows XP desktop experience**. The site should mimic the nostalgic UI of Windows XP while showcasing my **developer portfolio, projects, and skills**.

Link: <https://github.com/samriddhakunwar/windowsXpPortfolio>

Daraz Clone

Developed a scalable e-commerce web application, a clone of Daraz, using Next.js, integrating a backend API and relational database. Implemented features including JWT-based authentication, dynamic product management, shopping cart functionality, and order handling, ensuring efficient state management and optimized performance.
